

Alternative for larger outside area (30 – 100 m2)

1. Extend an existing zone by connecting the 100V amplifier input for slave operation on existing 100V speaker Line or configure an extra zone by connecting the line level amplifier input to the line level zone output of the existing system
2. Prerecorded messages are broadcasted to a larger outside area, sizing over 30m2
3. To drive 2 more speakers that are connected to the loudspeaker line, a larger size amplifier is required

Alternative for small applications where complete solution required

1. Prerecorded messages are fed through a third party messaging service or stored on the Bosch LBB1965 message manager
2. By means of a line level cable feed, a connection is made to the mixing amplifier emergency input.
3. Prerecorded messages are broadcasted inside and outside, while overriding live announcement and background music
4. For on the fly announcements, the table top call station can be used to address people in store as well as outside the store
